Telegram quick guide

1. Download telegram: https://telegram.org/
2. Open the app/web version and start a new conversation using the icon on the top left. Alternatively add BotFather as a contact.
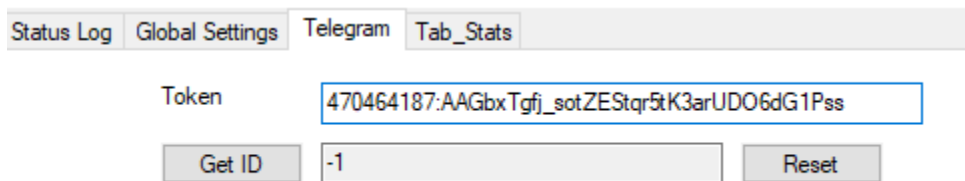

Image:

3. Search for BotFather and initiate a conversation.
4. Use the command /newbot to create your own bot.
5. Name it anything, such as telegram_cc_bot or something, it has to be unique though.

Image:

6. Copy paste the token into the Telegram section of the settings screen.

Status Log	Global Settings	Telegram	Tab_Stats

Token `470464187:AAGbxTgfj_sotZEStqr5tK3arUDO6dG1Pss`
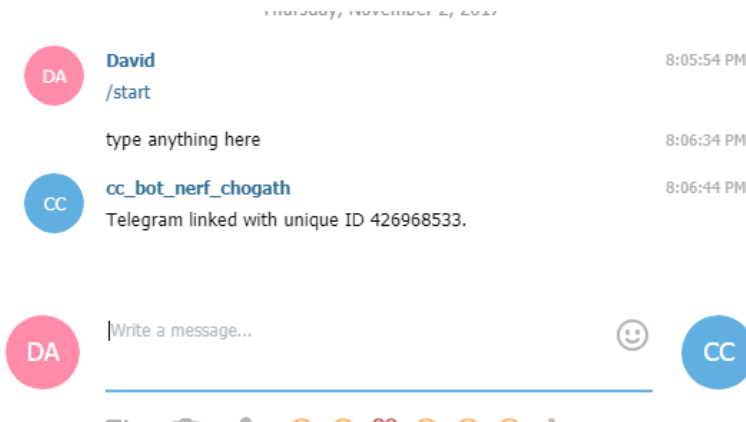

Get ID	-1	Reset

7. Save the settings (IMPORTANT).

8. Press the Get ID button, a message will pop up, click OK and start a conversation with the bot you just created.

DA   **David**   8:05:54 PM
        /start

        type anything here   8:06:34 PM

CC   **cc_bot_nerf_chogath**   8:06:44 PM
        Telegram linked with unique ID 426968533.

DA   Write a message...   ☺   **CC**

10. A message will pop up saying link success.

11. Telegram will now be enabled, for now the only feature is that it sends you updates on the current fishing task – the idea is that eventually it will support remote commands, send you pictures of its current progress, or even pausing.
12. If you have any issues please use the discord.
